

PS05 — AI Innovation for Public Services & Citizen-Centric Governance

• JANSEVA-X

From citizen intent to completed government application.

Intent

Consent

Completion

Intent-first. Consent-based. Officer-controlled.

The citizen should not have to learn the system before using it.

Citizens hunt for portals, interpret requirements, gather documents, then enter the same data repeatedly.

01 Deadlines become pressure.

Urgency rises when the next step is unclear.

02 Repeated fields create frustration.

Document hunting slows everything down.

03 Queues add uncertainty.

Without clear status, citizens are left waiting and wondering.

The burden is not just paperwork.
It is uncertainty at every step.

THE SOLUTION

Tell JANSEVA-X what you need.

An intent-first journey that routes citizens to the right service while keeping consent visible.

01 · UNDERSTAND

Start with intent

Citizens explain what they need in their own words, by voice or text.

- Service discovery made simple
- Guided routing to the right service

02 · PREPARE

Prepare with consent

Smart Fill prepares ready-to-review fields. Smart Attach aligns required documents.

- Consent stays visible and explicit
- Smart Fill + Smart Attach reduce gaps

03 · COMPLETE

Complete with clarity

Submit, track and move through a clear officer-owned application lifecycle.

- Status stays easy to follow
- Every request has an owner

A complete guided Trade Licence Renewal journey.

Intent, consent and smart preparation lead to mock verification, ticket tracking and an informed draft/submit choice.

The application, unfolding step by step

trade licensese

You need an trade license to operating service fully license get and and the refresh your

Trade license

Renew Action

Buy license

No Internet Production or No Internet Login

01 · Intent

Start with the service the citizen came for.

trade licence confirm

Unlocks for renew my fail →

Trallice update:

02 · Assist

Consent unlocks Smart Fill + Smart Attach.

Citizen-led journey

The screenshot shows a web application interface for a 'Citizen-led journey'. On the left is a sidebar with a user profile and navigation links: 'Identity', 'Document', 'Reference', and 'History'. The main area is titled 'Digital license renewal' and contains a form with several input fields: 'Document', 'Ticket', 'Smart Attach', and 'Smart Attach'. There is a 'Submit' button at the bottom right of the form. The interface is clean and modern, with a light blue and white color scheme.

03 · Complete

Verify identity, get a ticket, then submit or save draft.

Guidance with clear boundaries.

✓ Consent boundary

Preparation begins only after explicit citizen consent.

⚡ Smart Fill + Attach

Ready-to-review fields and required documents using synthetic demo data.

👤 Identity + tracking

Mock verification, ticket reference and clear application status.

Prototype only — no real registry retrieval or government data access.

Verification is visible, deterministic and clearly marked as a prototype.

A guided synthetic journey — from document capture to face and biometric demos.

Prototype sequence

01 Mock Aadhaar + mock PAN

02 Mock e-KYC + face demo

03 QR fingerprint + five-finger scan

● Demo state

Synthetic-only by design.

The prototype makes its verification boundary impossible to miss.

- ✓ Mock documents and demo biometrics only
- ✗ No real government provider is contacted

Safe to present, inspect and repeat.

→ Every state is visible before the next step begins.

AI assists the officer. The officer owns the final decision.

One shared application state keeps citizen progress and officer action aligned from intent to completion.

1

Submission enters the queue

Citizen submission and evidence arrive in one shared case state.

2

Officer claims and reviews

The officer reviews evidence, identity signals and application context.

3

AI advises. Officer decides.

Approve, correct, or reject remain officer decisions.

Approve Correct Reject

Shared lifecycle state connects citizen progress, evidence and officer action.

How it is built

Two service journeys, one shared foundation — designed for citizen trust and officer ownership.

One foundation, two experiences

The architecture keeps complexity behind the scenes.

Citizen frontend + backend

A guided public-service journey from intent to completion.

Shared state layer

PostgreSQL + Prisma keep every handoff consistent.

Employee frontend + backend

JANSEVA AI, mock verification, and PWA-ready workflows.

Trust moves with the case — from citizen consent to employee action.

Built around consent, ownership and controlled lifecycle states.

Every request is checked at the point of access, action and transition.

Identity & authority

The right actor, with the right permission.

JWT authentication

Reject unauthenticated requests and inactive accounts.

Role + ownership validation

Confirm role authorization and resource ownership.

State & boundary controls

Safe transitions, isolated execution.

Lifecycle validation

Allow only valid, controlled state transitions.

Idempotency + isolation

Protect documents and isolate mock-provider behavior.

Control is explicit at every trust boundary.

Consent → verify → own → transition

A reusable layer for clearer, more guided service journeys.

One service foundation that guides citizens today and expands across government workflows tomorrow.

1

For citizens

Less friction

Clearer status from intent through completion.

2

For government

Structured review

Advisory AI supports review while officers retain ownership.

3

Future roadmap

More services

A reusable layer designed to extend beyond one journey.

JANSEVA-X

Government services should understand citizens.

Tell JANSEVA-X what you need. We will help you get it done.
